19. ABSTRACT (Continue on reverse if necessary and identify by block numbers) This report summarizes qualitative and quantitative data on the chemical variability of approximately 300 features (chemical components or mixtures of components) with concentrations greater than 0.1 mg/ml in Air Force distillate fuels obtained from over 50 sources. These data were obtained to better understand the environmental effects of possible fuel spills and to serve as a data baseline in photochemical smog and soot formation studies. Fifty-four petroleum-derived JP-4 fuels, one shale-derived JP-4 fuel, and one petroleum-derived JP-5 fuel were analyzed. The variability of the absolute concentrations in mg/ml was assessed for each feature in the capillary GC/FID(gas chromatography/flame ionization detection) analysis of the 54 fuels. Data base management programs developed and used in this assessment included the calculation of averages, ranges, standard deviations, and percent relative standard deviations of the 300 chromatographic feature concentrations in duplicate analyses of almost all of the fuels. The variability of the data acquisition and data analysis phases of the study was also assessed by calculating the

averages, ranges, standard deviations, and percent relative standard deviations for the 300 feature concentrations of one JP-4 fuel, which was used as the Reference Fuel and analyzed 14 times.

This report is presented in three volumes. Volume I contains the technical discussion, Volume II consists of illustrations, and Volume III contains the sample data package for JP-4 reference fuel.

PREFACE

This research was conducted by Monsanto Company, Dayton Laboratory, 1515 Nicholas Road, Dayton, Ohio 45407 under contract No. F08635-83-C-0067, and JON 19002027 for the Headquarters Air Force Engineering and Services Center, Engineering and Services Laboratory, Environics Division, Tyndall AFB, Florida 32403. Thomas B. Stauffer was the AFESC/RDVC Project Officer.

The work was begun in December 1982 and completed in November 1983. This Interim report covers the analysis of 54 different JP-4 fuel samples, one JP-5 sample and one shale-derived JP-4 sample.

This report is presented in three volumes. Volume I contains the technical discussion, Volume II consists of illustrations and Volume III contains the sample data package for JP-4 reference fuel.

This report has been reviewed by the Public Affairs Office and is releasable to the National Technical Information Service (NTIS). At NTIS it will be available to the general public, including foreign nations.

This report has been reviewed and is approved for publication.

** - Each file must be processed to this point before beginning analysis of next file.*

^aXXX represents a unique three-digit number associated with all files generated from a particular sample injection.

Method is a method that contains the normal hydrocarbons as calibration peaks as well as the three impurities and internal standard peaks. This method is used only for calibration purposes because the factors are modified during this process. Peak analysis programs are **MMAP** and **VIRGA**.

*This file is the same as HRCANE, except that the factor for the solvent is zero. All other features, including the internal standard, have a factor of 1.0. **HRCANE** contains great sections on **solvent selection** and **calibration**.

4 never normally runs the post analysis programs that create the EXP file.

Conversion converts all PIV's to Revets.

The file can be analyzed based on Revote Indices.
NMP lists the data base contents.

MP7 lists the average concentrations and statistics for each named pool in the data base.

"MPS lists the average R.I. and statistics for each named peak in the data base.

^aKOVANE is a copy of DPPCNT used for calibration so that corrections to the factors during calibration do not affect the final concentration calculations. These methods include, as named features, the n -alkanes, impurities and internal standard, and post analysis programs KOVPG1 and FILEA.

^bCALB is used as a temporary sample name and triggers the calibration of FILEA.

^cIf the BIPXXX:NN file was not formed, it may be created at this point by running:NN,NOVAT,DPPXXX,NN.

^dEach file must be processed through this step before beginning another file because the contents of FILEA will be altered by the next calibration.

^eDPPCNT is the master method for calculating absolute amounts and contains named features for all features identified in the Reference Fuel. DPPFMT calculates the percent relative to the reference fuel for these features.

^fAlternatively, :TR,FIADD,NN10,BUPXXX.

Footnotes

[1] First 3 masses are the 3 most intense, listed in order of decreasing intensity. Additional masses, in random order in parentheses, are of assistance in identification. Underlined masses were used in GC/MS quantitation.

[2] Specific Identification Confidence Level.

4 = known standard;

3 = "certain";

2 = probably correct;

1 = possibly correct;

-- = not identified.

[3] Calculated from GC/FID retention times by interpolating between known boiling points of normal alkanes.

[4] Meyers & Pitser (reference in text). Column programmed from 35°C to 200°C at 1°C/min.

[5] Schröder (reference in text). Isothermal KI's at various temperatures. Lowest listed temperature used in every case.

[6] Bredsel (reference in text). Isothermal KI's, mostly at 90°C.

[7] Smith, Harper & Jaber (reference in text). Column programmed from 10°C to 210°C at 5°C/min.

(8) Class Code.

- NN normal alkanes
 BA branched alkanes
 G/E cycloalkanes/alkenes
 D dienes, bicyclics, or cyclic alkenes
 BB benzene and substituted benzenes
 MN naphthalene and substituted naphthalenes
 AM alcohols or ethers
 RA ketones or aldehydes
 T triply hydrogen deficient - any combination of 3 rings and/or double bonds.

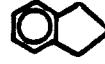

TT pycraline

SC gugaline

I indane

(9) Class Identification Confidence Level.

- ++ = known standard;
 + = probably correct;
 * = possibly correct;
 - = just a guess.

Footnotes

* = Possible problem in correlating GC/FID feature with GC/MS feature.

[1] First 3 masses are the 3 most intense, listed in order of decreasing intensity. Additional masses, in random order in parentheses, are of assistance in identification. Underlined masses were used in GC/MS quantitation.

[2] Specific Identification Confidence Level.

4 = known standard;

3 = "certain";

2 = probably correct;

1 = possibly correct;

- = not identified.

[3] Calculated from GC/FID retention times by interpolating between known boiling points of normal alkanes.

[4] Hayes & Pitner (reference in text). Column programmed from 35°C to 200°C at 1°C/min.

[5] Schröder (reference in text). Isothermal KI's at various temperatures. Lowest listed temperature used in every case.

[6] Brodzel (reference in text). Isothermal KI's, mostly at 80°C.

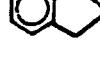

[7] Smith, Harper & Jaber (reference in text). Column programmed from 10°C to 210°C at 5°C/min.

[9] Class Identification Confidence Level.

++ = known standard;
 + = probably correct;
 o = possibly correct;
 - = just a guess.

[10] The mass spectrum is extremely weak, but could fit 3-methyl-1-butanol. The boiling point of that molecule is off by 13°, but we have no data showing relative retention times for alcohols vs. alkanes.

[11] Scans on either side of #0429 (RI = 064-065) were examined for changing mass spectral patterns, but no change was evident. It is possible that two compounds with very similar boiling points and mass spectra coelute at this feature.

Footnotes

- Terms in braces are general descriptions, where specific identifications are not possible.

* - Possible problem in correlating GC/FID feature with GC/MS feature.

[1] First 3 masses are the 3 most intense, listed in order of decreasing intensity. Additional masses, in random order in parentheses, are of assistance in identification. Underlined masses were used in GC/MS quantitation.

[2] Specific Identification Confidence Level.

- 4 = known standard;
- 3 = "certain";
- 2 = probably correct;
- 1 = possibly correct;
- = not identified.

[3] Calculated from GC/FID retention times by interpolating between known boiling points of normal alkanes.

[4] Hayes & Pitner (reference in text). Column programmed from 35°C to 200°C at 1°C/min.

[5] Schröder (reference in text). Isothermal KI's at various temperatures. Lowest listed temperature used in every case.

[6] Bredael (reference in text). Isothermal KI's, mostly at 80°C.

[7] Smith, Harper & Jaber (reference in text). Column programmed from 10°C to 210°C at 5°C/min.

3,4-Dimethylheptane (859.8)
4-Ethylheptane (865.0)
1-Methyl-4-ethylbenzene (946.8)
<u>n</u> -Butylcyclohexane (1025.6)
1-Methyl-2-isopropylbenzene (1049.1) (probably the C ₄ -benzene component of FE #173)
1,4-Dimethyl-2-ethylbenzene (1060.2) (probably the C ₄ -benzene component of FE #178)

644	17, 30, 38/39, 47

USER EVALUATION OF REPORT

REFERENCE: Variability of Major Organic Components in Aircraft Fuel
Volume II: Illustrations (Volume II of III)

Please take a few minutes to answer the questions below, and return this sheet to AFESC. Your comments will provide us with information essential for improving future reports.

1. Does this report satisfy a need? (Comment on purpose, related project, or other area of interest for which report will be used.)

2. Specifically, is the report being used? (Information source, design data or procedure, management procedure, source of ideas, etc.)

3. Can the information in this report lead to quantitative savings in man-hours/contract dollars saved, operating costs avoided, efficiencies achieved, or achievement of environmental objective? If so, please explain.

4. What is your evaluation of this report in the following areas?

- a. Is the presentation easy to follow? _____
- b. Is the report complete? _____
- c. Is the report easy to read and understand? _____
- d. Is the research contained herein easy to implement? _____
- e. Is the listed reference material adequate? _____
- f. Does the report relate to your area of interest? _____

g. Does the report meet your expectations? _____

h. Does the report raise unanswered questions? If so,
please list.

i. General Comments (Indicate what you think should be
changed to make this report and future reports of this type more
responsive to your needs, more usable, improve readability, etc.)

5. If you would like to be contacted by the people who prepared
this report to ask specific questions or discuss the topic,
please fill in the following information.

Name: _____

Telephone Number: _____

Organization Address: _____

6. Please mail the completed form to:

Air Force Engineering and Services Center
AFESC/RDXX
Tyndall AFB FL 32403
